

SYSTEM AND METHOD FOR PROVIDING POST HOC  
ACCESS TO LEGACY APPLICATIONS AND DATA

ABSTRACT

A method and architecture having components for performing a  
5 method comprising the steps of: forming a simple bi-directional  
communication link between each of the clients and a server; and,  
transmitting along the communication link at least one of two  
kinds of messages comprising a first message which is a  
synchronous query/response, and a second message which is an  
10 asynchronous subscription based event notification, to allow  
arbitrary data structures to be rendered into a standard  
communication format.
